Fidelity provides %20 cost advantage by increasing operational efficiency.

Fidelity empowers companies by automating the full lifecycle of assets and expenditures with advanced business management modules & functions integrated on a single web-based platform. Cut down on cost and return on investment within the first year of implementation.

Manage critical assets that affect compliance, risk, & business performance.

With Fidelity, building an end-to-end asset and spend management system is easy. Asset, budget, spend and accounting data are no longer in separate systems.

A modular and scalable platform to manage the full lifecycle of assets and expenditures with built-in budget, demand, procurement and accounting processes, Fidelity ensures compliance and proactive budget control to build effective sourcing strategies.

Asset lifecycle management.

Acting as the core module, Asset Lifecycle Management manages complete lifecycle of the asset portfolio including fixed assets, inventory, IT equipment, branches, ATMs, real estates, vehicles and consumables. It helps companies to monitor and track all assets, inventory, their classifications, calculations, configurations, transfers, warranty periods and all phases of the lifecycle, from purchasing to disposal online.

Fixed assets and depreciation simulation, barcode automation extension, multiple warehouse transfer support are outstanding features of the core module.

Assets & fixed assets management.

Fixed Assets and Depreciation Management supports multiple depreciation schedules and easy to use cost calculations. It also monitors leased assets and the leasing lifecycle. The module automates accounting entries for assets, including location changes and depreciation calculations.

Demand management.

Demand Management enables monitoring of requests, their prioritization, controls their conformity to internal processes and provides an approval workflow and tools for detailed analysis.

Centralized sourcing from a warehouse or redistribution from location to location is also possible for meeting product requests. Purchase requests are created using self-service e-forms.

Procurement management.

Purchasing departments can now easily aggregate, prioritize, and fulfill demands for both strategic projects and day-to-day tasks. Purchases can be tracked for budget targets at each stage of the process such as planning, finalization, and realization. Planned versus realized budgets can be monitored by business units.

Supplier portal creates a close ecosystem among suppliers with automation of e-RFPs, collection and evaluation of proposals, e-purchase orders, and e-invoices.

Contract management.

Work effectively when it comes to managing contracts. Fidelity Contract Management provides centralized management of the contracts including product specifications, prices, service level agreements, warranty conditions, and special conditions.

Supplier management.

Supplier Management help companies manage all data related to suppliers including contact information, contracts, product and service catalog, price lists, payments orders, invoices, and supplier performance evaluation.

Fidelity ensures all purchases to be made in accordance with supplier contracts reducing maverick spending that are outside of the centralized purchasing process.

Budget control.

Fidelity Budget Control automates the full budgeting lifecycle, including preparation of budgets for different business units, their consolidation, and revisions.

Demands and purchases can be tracked according to the budget during their planning, finalization, and realization stages. Pre-defined budget types, items, templates, price lists and models make it easy to form budget projections. Moreover, Budget Control facilitates preparation of project-based budgets and expenditure budgets by business units.

Expense management.

Designed to manage all employee expenses more effectively, companies can centrally track, actively control and monitor various expenditures such as travel, accommodation, training, food, advance payments, and other expenses.

With approval flows, related departments increase spend visibility and reduce processing time and reporting costs.

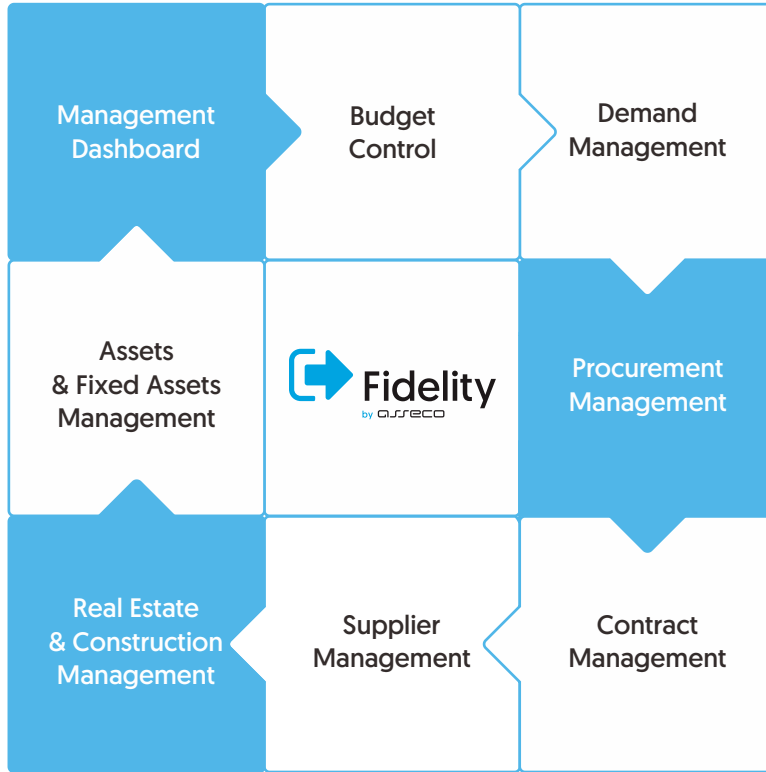

Real estate management.

Fidelity provides centralized management, reporting, and analysis for the real estates owned or leased by companies. All data related to the real estate portfolio is managed including lease contracts, insurance policies, taxes, maintenance services and expenditures by eliminating panelty risks.

Construction management.

Construction Services Management provides an integrated and centralized platform for all parties working on construction projects ensuring effective collaboration and management. Together with the Real Estate Management Module, it enables centralized management of the end-to-end lifecycle of real estates, from construction to divestiture.

Business Process Flow.
